

MULLAN GROUNDWORKS LUCY CAVENDISH COLLEGE

THE CONTRACTOR

Mullan Groundworks & Civil Engineering Ltd undertakes groundworks, infrastructure, drainage and hard-landscaping projects across education, commercial and residential sectors. Its portfolio records Lucy Cavendish College in Cambridge, delivered for SDC Builders.

PROJECT OVERVIEW

Completed in 2022, the redevelopment created an accessible new hub within Lucy Cavendish College's conservation-area campus. Designed by R H Partnership Architects, it provides 72 en-suite bedrooms with cafe, dining, social and teaching space. Landscaped routes reconnect the building with existing gardens.

72 EN-SUITE BEDROOMS

KEY REQUIREMENTS

The external works needed to complement the new building and its conservation-area setting, create clear accessible routes and provide durable, precisely defined interfaces between paths, lawns and planting. The edging also needed to accommodate straight runs and controlled curves within the landscaped courtyards.

PRODUCT

CORE PRO EDGE is a professional edging system made from marine-grade 6063 tempered aluminium alloy. Its anodised, rust-free profile can form precise straight runs or controlled curves across hard-landscape schemes.

CORE PRO EDGE creates clean, durable interfaces between paths, planting and other finished landscape surfaces.

SOLUTION

Mullan Groundworks installed CORE PRO EDGE to define the new paths and landscape interfaces. The aluminium profiles were aligned to the design geometry, joined into continuous runs and secured before adjoining finishes were placed. The anodised edging created crisp boundaries without visually competing with the brick, timber and planted setting.

RUST-FREE MATERIAL

Marine-grade anodised aluminium provides a durable, low-maintenance edge.

ACCESSIBLE DETAILING

Clean, consistent interfaces help define paths and adjoining landscape finishes.

PRECISE FINISH

The flexible profile creates controlled curves or true straight runs.
